During sequence assembly data is compared from overlapping clones.

During sequence sare found these are annotated as variations where differences are found these are annotated as variations the coverlapping clone name. Note that the together with a note of the overlapping clone name what the corresponding to the overlapping clone as we submit sequences with corresponding to the overlapping clone, as we submit sequences with corresponding to the overlapping clone, as we submit sequences with an alternate chemistry or covered by high quality data (i.e., phred quality sequences was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality sequencing problems, such 30); an attempt was made to resolve all sequencing problems, such 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mil subclone; and the abbreviations are used to associate primary accession numbers given abbreviations are used to associate primary accession numbers given abbreviations are used to associate primary accession numbers given abbreviations are used to associate primary accession numbers given abbreviations are used to associate primary accession numbers given abbreviations of found at the complex primary accession numbers given the primary accession numbers given ababases can be found at the primary accession on the WORMPEP in the primary accession on the wormper of the primary accession on the wormper the primary accession on the wormp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8037 AGAGATGCCCAAACTGTTTT 8056
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 20;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      167412 AGAGATGCCCAAACTGTT 167430
                                                                                                                                                                                                                                                                                                                                                                                                                                    where differences are found these are annotated as variations where differences are found these are annotated as variation the together with a note of the overlapping clone name. Note that the together with a note of the overlapping clone, as we submit sequence submission variation annotation may not be found in the sequence submission only a small overlap as described above.

Only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate regions were either double-stranded or sequencing problems, such 30; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one MI3 subclone; and the one plasmid subclone or more than one MI3 subclone; and the abbreviations are used to associate primary accession numbers given abbreviations are used to associate primary accession numbers given abbreviations are used to associate primary accession numbers given abbreviations are used to associate primary accession numbers given abbreviations are used to associate primary accession numbers given abbreviations are used to associate primary accession numbers given databases can be found at the feature table with their source databases: Em:, EMBL; Sw:, in the feature table with their source databases: em: accession on the worwper database can be found at the feature table with their source databases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              19;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sequence.

Sequence Quality Assessment:

This entry has been annotated with sequence quality estimates computed by the Phrap assembly program. All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than

1 error in 10,000 bp. Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phremality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one MI3 subclone; and the assembly was confirmed by restriction digest.

Sequence Validation:

This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.

It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTE: This is a 'working draft' sequence. It currently consists of 35 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Center code: CSHL

This Clone is from an A. gambiae BAC library (ND-TAM) provided by F.H. Collins and sequenced by The Institute for Genomic Research (TIGR). The BAC library was generated from A. gambiae PEST strain to minimize the inclusion of DNA from microorganisms that inhabit the gut. The DNA is derived from mixed sexes of larvae. The back constructed at Texas A&M University, College Station, Texas 77843-2123, USA using a HindIII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Seq primer: M13 For Class: BAC ends.

                                                                                                                                                                                                                                                                                                                                           Conservative
                                                                                                                                                                                                                                                                                                                                                                                                         (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA polymucleotide kinase. Adaptor oligonucleotides were adaptored to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to electrophoresis. Vector DNA was prepared from a derivative electrophoresis. Vector DNA was prepared from a derivative with adaptors complementary to the insert adaptors and adaptored vector DNA, and transformed into adaptors and adaptored vector DNA, and transformed into and selected for ampicillin resistance."

```
The invention relates to a nucleic acid array, where each coordinate CC contains a single nucleic acid species having one of 770 nucleotide CC sequences (appearing as ABS76747-ABS77518) a of a Xenopus embryonic gene CC product, or its complement or hybridisable fragment of not less than CC 20 contiguous nucleotides of one of those sequences. Also included are CC detecting differential expression of embryonic genes, comprising: CC contacting a nucleic acid array comprising genes expressed in CC control cells, and (b) detecting differential hybridisation of nucleic acid sfrom the sample cells with nucleic acids from sample and CC defects in development, comprising: (a) contacting nucleic acids from the sample cells relative to the control cells; and detecting products known to play a fundamental role in the development process; and CC cells relative to a standard. The invention is useful to identify genes involved in embryonic development and related process; and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel p53-binding region of a human CD95 receptor DNA molecule. The p53-binding region, or a vector containing it, can be used to screen for apoptosis-modulating substances potentially useful for cancer chemotherapy. This sequence represents a fragment of the human CD95 receptor promoter which is capable of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 2; Fig 5; 12pp; German.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                 The present sequence represents the complete genome of Chlamydia pneumoniae, and encodes proteins AAY34584-Y35879. C. pneumoniae causes to be a contributing factor in heart disease, sarcoidosis, sinusitis, encoded by the open reading frames of the C. pneumoniae genome (see Vectors Can be used in immunogenic compositions as vaccines. AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.

                                                                                                                                                                                                                                                                                                        The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the CC genes, their use in the discovery of novel antibiotics, the essential CC genes themselves and the encoded proteins. The prokaryotes used are CC genes themselves and the encoded proteins. The prokaryotes used are CC pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets of identify proteins used in proliferation, to express these proteins. CC and to obtain antibodies capable of binding to the expressed proteins. CC and to obtain antibodies capable of binding to the expressed proteins. CC and rooteins can be used to screen compounds in rational drug discovery CC programmes. The antisense nucleic acid sequence is also useful to screen CC a wide variety of organisms. The present sequence encodes an CC a wide variety of organisms. The present sequence encodes an CC essential prokaryotic cellular proliferation protein. CC of the printed specification, but was obtained in electronic CC format directly from MIPO at

                                                                                                                    The invention relates to antisense inhibitors of genes essential to comprove the cellular proliferation, their use in identifying the cellular proliferation, their use in identifying the censes, their use in the discovery of novel antibiotics, the essential comproverses themselves and the encoded proteins. The prokaryotes used are censes themselves and the encoded proteins. The prokaryotes used are computationally president to proteins and Enterococcus faecalis. The computation is also useful for the identification of potential new targets computed to identify proteins used in proliferation, to express these proteins. Computed to obtain antibodies capable of binding to the expressed proteins. The programmes. The antisense nucleic acid sequence is also useful to screen compounds in rational drug discovery compounds. The antisense nucleic acid sequence is also useful to screen compounds in rational drug discovery model to model to acid sequence in the control of the protein collular proliferation protein.

Compound the process of the protein protein collular proliferation protein.

Compound the protein collular proliferation protein.

Compound the protein collular proliferation protein.

Compound the protein collular proliferation protein.

                                                                                                                                                                                                                                                                                                                             The present sequence is one of a large number of 5' ESTs derived from CC identified within the present sequence. The 5' ESTs were prepared from CC total human RNAs or polyA+ RNAs derived from 3' untranslated region (UTR) CC expences usually correspond mainly to the 3' untranslated region (UTR) CC libraries. Such ESTs are not well suited for isolating cDNA sequences not well suited for isolating cDNA sequences for ends of mRNAs and even in those cases where longer CC isonated from mRNAs with intact 5' ends and can therefore be comed to obtain full length cDNAs with intact 5' ends and can therefore be comed to obtain upstream regulatory sequences and to design correspond to obtain upstream regulatory sequences and to design to expression and secretion vectors.

                                                                                                                                                                                                                                                                                                                                                                                                                          CC The invention describes a method of monitoring differential expression of CC genes in a first Bacillus cell relative to expression of the genes in CC other Bacillus cells, comprising hybridising labelled nucleic acid probes in CC isolated from Bacillus cells to a substrate containing array of Bacillus cells to a substrate containing array of Bacillus cells to a substrate containing array of Bacillus cells relative gene expression by an observed hybridisation reporter signal of common common second Bacillus cell relative to expression of the same genes in a first Bacillus cell relative to expression of the same genes common of several genes from a Bacillus cell, discovering the compression of genes, identifying possible functions of unknown open reading frames and cell myression of genes may be used to provide a representation of the way cell in expression of genes may be used to provide a representation of the way cell solution on commental stress or other physiological provocation. Extensive cequals one gene or one open reading frame, since sequence information is changes in culture conditions.

CC available. This sequence represents a genomic sequence tag (GST) used in content of the invention. but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides the protein and coding sequences of a number of human secreted proteins. These can be used in the treatment cancer, immune diseases, haemostatic disorders, hyperproliferative disorders, renal disorders, cardiovascular disorders, respiratory disorders, neurological diseases, infections and reproductive system disorders. The present sequence is a coding sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated nucleic acid molecule encoding a human secreted protein used in preventing, treating or ameliorating a medical condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 2002-340092/37.

Isolated nucleic acid molecule encoding a human secreted protein used in preventing, treating or ameliorating a medical condition

```
The present sequence represents a specifically claimed partial nucleic cacid sequence encoding human RAD54 (hRAD54). A method for analysing a consequence of at least 15 and no more than 30 consecutive bases of the DNA sequence of at least 15 and no more than 30 consecutive bases of the DNA sequence encoding hRAD54. hRAD54 is a gene thought to be present in tumours that display allelic imbalance at 1932, the chromosomal band consecutive bases of for intumours that display allelic imbalance at 1932, the chromosomal band consecutive bases of four minimal regions of chromosome 1 deletion in CC breast carcinomas. hRAD54 is useful for production of proteins, inter CC alia, that have been identified as novel hRAD54 by homology between the CC amino acid sequence given in AAW62186 and known amino acid sequences concer, including Koroderma Pigmentosum and Bloom syndrome, Werner's Syndromes and X-linked mental retardation with alpha-thalassaemia CC dyndromes and breast cancer. hRAD54 polynucleotides are also useful for CC detecting complementary nucleotides for use as a diagnostic agent, case of the complementary nucleotides for use as a diagnostic agent, case of the complementary nucleotides for use as a diagnostic agent, case of the complementary nucleotides of disease or susceptibility to diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       뭐

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; SEQ ID NO 5933; 1297pp + Sequence Listing; English.

                         The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders,
                                                                                                                                Disclosure; SEQ ID NO 5934; 1297pp + Sequence Listing; English.
                                                                                                                                                                                 Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition
                                                                                                                                                                                                                                                                      WPI; 2001-465570/50.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:

APPLICANT: HYSEG, Inc.

FITTLE OF INVENTION: NOVEL NUCLEIC ACID SEQUENCES OBTAINED

TITLE OF INVENTION: FROM VARIOUS CDNA LIBRARIES

FILE REFERENCE: 20411-756

CURRENT APPLICATION NUMBER: US/09/918,995

CURRENT FILING DATE: 2001-07-30

PRIOR APPLICATION NUMBER: US/09/235,076

PRIOR APPLICATION NUMBER: US/09/235,076

PRIOR FILING DATE: 1999-01-20

NUMBER OF SEQ ID NOS: 38054

SOFTWARE: PASTSEQ for Windows Version 3.0

SEQ ID NO 1867

LENGTH: 472

TYPE: DNA

ORGANISM: Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 15

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                Score
